

## DO YOU KNOW.....

During the first 3 years:-

1. The brain triples in weight and creates 1,000 trillion connections among the neurons.
2. New cells that build tissue are rapidly growing.
3. Food sensory starts to develop. The aroma and taste of milk can stimulate their appetite.
4. The physical growth of a child progresses well if nutrition for bones and teeth are sufficient at this stage.
5. Children need a healthy digestive system to ensure nutrients are absorbed completely.

### CHILD'S VITAL NEEDS

1. Rapid brain development.

2. Formation of cells to build a strong body.

3. Food that taste good.

4. Good foundation in formation of bones and teeth.

5. A healthy digestive system for optimum nutrient absorption in order to build strong immune system.

### NUGROW 123 CONTAINS

Good levels of AA, Taurine and DHA.

High in Folic Acid for development of DNA required in new cell formation and regeneration.

Whole milk which is natural milk, not only provide essential vitamins and minerals , it also taste good. Children say that NUGROW taste like ice-cream! This enhance confidence in their drinking.

Good level of calcium that are essential in the early formative years for bones and teeth development.

FOS (Active Prebiotic) that helps increase bifidobacteria (good bacteria), which helps maintain a healthy intestinal environment and aiding good digestion.
